

Prioritize for validation

Diagram illustrating the concept of a "maximal margin" in a classification task. The diagram shows a 2D space with various points representing different gene deletion combinations. A red arrow points from a point labeled $cln3 \Delta bck2 \Delta pds1 \Delta whi5 \Delta$ to a point labeled $cln3 \Delta bck2 \Delta whi5 \Delta$. The point $cln3 \Delta bck2 \Delta whi5 \Delta$ is highlighted with a red oval, indicating it is the point with the maximal margin. The points are arranged in a grid-like fashion, with some points having different colors (blue, green, red) to represent different classes or states.
