

Fig. 7. CircleMap display of the ErbB2 pathway. For each node, ER status, IPAs, expression data and copy-number data are displayed as concentric circles, from innermost to outermost, respectively. The apoptosis node and the ErbB2/ErbB3/neuregulin 2 complex node have circles only for ER status and for IPAs, as there are no direct observations of these entities. Each patient's data is displayed along one angle from the circle center to edge.
