	cilium assembly					- 20	
Organelle Organizatioı	microtubule nucleation						
	Golgi organization					- 18	
	rRNA processing					- 16	
	tRNA export from nucleus						
Transcripti							
Translation	cotranslational protein targeting to membrane						
r	ibosomal large subunit biogenesis					- 14	
	ribonucleoprotein complex subunit organization						
NADH dehydrogenase complex assembly						- 12	\subseteq
Respiration	n mitochondrial ATP synthesis coupled proton transport						pval
protein import into mitochondrial matrix)bc
ubiquitin-dependent ERAD pathway						- 10	Ť
ER Stress	protein folding in ER						
	protein folding					- 8	
	protein demannosylation						
PTMs	protein N-linked glycosylation via asparagine						
PINS	oligosaccharide-lipid intermediate biosynthetic process					- 6	
	GPI anchor biosynthetic process						
Other	Rab protein signal transduction					- 4	
	zinc ion transport						
		- RL	Σ	호		- 2
